

## **Course Outline**

### **Intermediate PhotoShop: (1 day course)**

This very popular course shows individuals how to develop a series of ideas, using some basic techniques. As confidence grows specific more advance approaches are introduced to encourage each individual to move forward.

This course is intended for delegates with previous experience who need to develop specific techniques to realise a range of their own ideas.

### **Topics covered:**

- Image and production issues overview level 2
- Layer, linking, blending and masking
- Alternative selections, paths and layer masks
- Cloning, healing and simple re-touching
- Histograms and image integrity
- Actions and batch processing
- Colour space and applications
- Print issues and production processes

The tasks are ordered in a way to learn and progress your understanding using the most effective approach to problem solving and opportunity for your own creative input. The aim of this intermediate course is to give you simple skills to apply to everyday image scenarios.

Although printing related issues are covered there will be no actual print production in the course.

Train-IT.co.uk Ltd also offer a one day or a two day Introduction and also an Advanced course.
