

Course Outline

An Introduction to PhotoShop (compressed 1 day course):

As an introduction to the software covering basic functionality and operations, this course will aim to offer an appreciation of what can be achieved and how learning this industry standard software can add value to your organisation.

Delegates will learn how to apply simple techniques to produce specific results.

This course is suitable for delegates from a range of work environments who need to deal with images and copy as part of their job.

Topics covered:

- Image and production issues overview level 1
- Tools functions and short cuts
- File types and applications
- Basic layer techniques
- Image size and resolution
- Type and image combined
- Simple selections

The main objective of this short course is to allow delegates new to the software to gain specific experience of key areas of image manipulation and to develop an ability to work on their own. The tasks are clear, easy to follow and offer an opportunity for their own creative input.

Train-IT.co.uk Ltd also offer a two day Introduction and Intermediate and Advanced courses.
