

## Course Outline

### **An Introduction to PhotoShop (2 day extended course):**

This two-day introduction to PhotoShop proves to be a real success. The two day format gives individuals time to explore each topic at their own pace. A series of theory introductions puts the practical in perspective. Simple demonstrations and step-by-step routines guide you through the examples.

- A complete set of handouts is provided with additional material to encourage practice outside the training time.
- One to one support is available to all who attend, to clarify and ensure the processes are understood.
- Hi resolution examples provided

This course aims to cover most of the topics you will ever need at an introduction level and will assisted a range of people including

- Marketing personnel
- Design and production staff
- Local Authorities
- Private companies
- Not for profit organisations
- Amateur photographers
- 

Covering the basic software functionality, this course aims to offer an appreciation of what can be achieved and how learning this industry standard software can add value to your organisation. Working at their own pace, delegates will learn how to apply simple techniques to produce specific results.

#### Topics covered:

- Image and production issues overview level 1
- Tools functions and short cuts
- File types and applications
- Basic layer techniques
- Image size and resolution
- Type and image combined
- Simple selections
- Short-cuts

The main objective of this short course is to allow people new to the software to gain specific experience of key areas of image manipulation and to develop an ability to work on their own. The tasks are clear, easy to follow and offer an opportunity for your own creative input.

Train-IT.co.uk Ltd also offer a one day Introduction and Intermediate and Advanced courses.
